

## HR150 RAIL PRODUCT INTRODUCTION

Conceal unsightly wires with the proper cable management solutions from SunModo.

The Helio Rail Family has a new member, SunModo is happy to introduce the HR150 open profile rail system. Using this open profile rail system you find the right solution to manage your PV cables. The HR150 PV cable management system maintains NEC compliance and eliminates the risk of using wire ties.

Cabling in PV installations is often organized using simple cable ties. These ties are highly susceptible to corruptions caused by weather conditions over time and require frequent maintenance and replacement. This is not the case with cable management options offered by the HR150.

**The HR150 family of products** are shown assembled above. Two HR150 Rails are spliced together with an HR150 Rail Splice. PV electrical wires are shown routed in the channels of the HR150 Rails, retained with two Wire Covers snapped into place.

**Quick and straightforward mounting without the need for tools reduces costs when it comes to the installation of cable ducts.**

## Helio Rails

All rails features both 1/4" and 3/8" side slots, and 1/4" top slot for clamping PV panels and are available in 84", 124", 164" and 206" stock lengths in clear and black.

## Rail Selection

The following table was prepared in compliance with applicable engineering codes and standards. Values are based on the following criteria: ASCE 7-10, Roof Zone 1, Exposure B, Roof Slope of 7 to 27 degrees and Mean Building Height of 30 feet

Load		Rail Span					
SNOW (PSF)	WIND (MPH)	4 ft	5 ft	6 ft	8 ft	10 ft	12 ft
None	100
